

AMCAD'S AiJMS

INTEGRATED JAIL MANAGEMENT SYSTEM

AMCAD's **integrated Jail Management System (AiJMS)** solution is a person-centric jail management application. AiJMS is a functionality-rich integrated solution that includes booking, inmate tracking and classification, medical, mug shot capture, inmate accounting, property inventory and management module for the jail. As part of our Justice Platform, the solution is integrated with AMCAD's Court Case Management and Enterprise Content Management system to provide an integrated justice solution for governments. Ease of use, reduced data entry, and smart navigation are some of the key benefits offered.

CORE COMPONENT OF AN INTEGRATED JUSTICE PLATFORM - PRETRIAL, COURTS, JAIL AND PROBATION

UNIFORM MANAGEMENT ACROSS JAIL

IDENTIFICATION

INTAKE

CUSTODY

RELEASE

SEAMLESS INTERFACES TO CRIMINAL JUSTICE PARTNERS AND AGENCIES

FLEXIBLE BOOKING PROCESS

- Configurable workflow processing functions
- Fingerprinting and mug shot, creating and/or updating inmate person data, personal property process, inmate trust account, classification and housing assignment, etc.

STANDARD AND CUSTOMIZED REPORTS

- Specialized report designer allows the user to easily configure ad-hoc reports
- Application uses grid views and easy-to-use filtering functions that can be exported into reports.

PERSONAL PROPERTY MANAGEMENT

- Tracks inmate personal property when confiscated, issued and released and uses electronic signatures for receipting
- Digital photographs can be linked to property records in addition to generation of bar code labels for identification purposes.

HIGHLY CONFIGURABLE

- Over 100 Added Value Tables (AVTs) that allow administrative users to enter and maintain values specific to their needs
- User can maintain, update and create new codes to meet the needs of their office without custom programming changes

SCANNING AND DOCUMENT MANAGEMENT

- MS Word templates are imported into the system and can be "bound" to data in the database
- Forms are attached to events and are automatically generated and attached to the event during event creation.

VISITATION MANAGEMENT

- Records and tracks visitation detail for those individuals visiting inmates while incarcerated
- Maintaining a list of authorized and prohibited visitors, pre-scheduled visits based upon facility requirements and visitation outcome detail

STATUS MONITORING

- Tracks inmate status during the booking and release processing- Ex: displaying length of time taken to book an inmate into jail, current location etc.

WORKFLOW MANAGEMENT

- Allows the user to define the steps involved in different business processes based on their individual needs
- Insures inmates are treated with consistency, thus contributing to data integrity

INMATE HOUSING AND TRACKING

- Tracks housing location detail including inmate movement and cell assignment, and keeps separate records for tracking and viewing of assignment history.

PERSON BASED

- Person information is entered only once and Includes biometric identifiers and traditional person descriptors.
